Swift Server Fundamentals

Build Linux services in Swift!

Nick Shook for SCALE 23x

What brought you here?

Prerequisites

- swift.org/install
- `swift -version`
- Set up your editor.
- Download contents from the Box link to the left.

Response
SQLite

Agenda

Build a health check endpoint.

Build an empty GET /polls endpoint using OpenAPI.

Create database-backed Poll model.

Build a POST /polls endpoint using OpenAPI to create a poll with tests.

Update the GET /polls endpoint with persistence and tests.

Finish RESTful resources on /polls.

Deployment considerations.

Why Swift Server

Performance

Safety

Expressiveness

Concurrency

Ecosystem

Unified Language
